STOCKS	CMP	BIAS	TRADING/ INVESTMENT STRATEGY
EXIDE INDUSTRIES	262.40	Positive	EXIDE Industries has taken support at its secular 38.2% Fibonacci levels (Feb 2016 lows to Aug 2018 highs). The stock is now signaling a major rebound from a probable oversold zone on the daily charts. We expect the stock to stage a major outperformance soon. Accumulate at CMP, and on dips between 230-235 zone, as we suspect on any up move from here on will be backed with spectacular volumes, lifting the stock above its all time high at 305 mark. With near term perspective, the stock is likely to aim 285 zone. Place stops below 221. Holding Period: 5 Months.
INTELECT DESIGN	229.75	Positive	We maintain our positive stance based on (1) Huge addressable market prospects (2) Highly-rated and digital-ready product portfolio, (3) Healthy order book, and (4) Strong footing amidst large deal wins. Technically, brace yourselves for a break out play on monthly charts. Also enjoy the hoopla over positive divergences on monthly/quarterly charts. Simply jump in and buy the stock at CMP, targeting 325 and then aggressive targets at psychological magical 501 mark. Holding Period 9 Months.
INTERNATIONAL PAPER APPM LIMITED	480.30	Positive	The key positive triggers:: 1: Positive domestic industry fundamental driven by rising income levels, growing per capita expenditure, improving literacy rates, rising circulation and an increasing number of newspapers and magazines, and rapid urbanisation. 2: Global pulp prices likely to remain strong. 3: Environmental restrictions by Chinese government on imports of low grade recycled paper is likely to further improve the demand for wood-pulp-based paper products. Establish longs at CMP, targeting 601 and then aggressive targets at psychological magical 751 mark. Stop at 391. Holding Period 5-9 Months.
JK PAPER	167.15	Positive	The stock is signaling a major breakout from a 11-month higher consolidation zone. The positive takeaway is that despite decline in broader markets, the stock is in limelight. We are sure; the scrilla bulls will dominate price action with long term perspective. Stochastic and major oscillators are currently on the bulls' side. Establish long positions at CMP, as the stock is likely to run towards its all time high at 194 mark. Aggressive targets placed at 225 mark. Place stops below 135. Holding Period: 3 Months.
NRB BEARING	191.60	Positive	Investors with long term perspective should look into accumulating NRB Bearing as the stock is signaling a major breakout on the monthly charts. The positive takeaway from recent price action is that the stock is rebounding from its key supports (38.2% of the move from June 2015 lows to June 2018 highs). Accumulate any corrective declines between 181--185 zone, as the stock is likely to run towards its psychological 200 mark and then aggressive targets at psychological 225 zone. Place stop below 149. Holding Period: 3 Months.

### Analyst's Pick: JK PAPER (CMP 167.15). Target: Rs. 201+

JK Paper (JKP) is one of India's leaders in copier paper market (with a 23% share); it is also the 2nd largest player in the coated paper segment (16%) and the 5th largest in packaging board (11%). The firm also is also a leading exporter of Branded Copier Papers with exports to 35 countries. The key positive trigger for the stock:

1. Positive domestic industry fundamental.
2. Global pulp prices likely to remain strong.
3. Environmental restrictions by Chinese government on imports of low grade recycled paper is likely to further improve the demand for wood-pulp-based paper products.

Technically, brace yourselves for a major rebound play from a complex 'higher consolidation pattern' on the daily charts. An impulse uptrend is seen forming on the daily time scale with sequence of higher high/ higher low pattern intact on monthly charts, with positive SAR series, major confirmation above its all-time highs at 194 mark. Add to that a bullish divergence and a rising stochastic signal (on weekly charts) with recent increase in volumes signaling a larger rebound. The 200 days Exponential Moving Average (EMA) of the stock on the daily chart is currently at 145. Any significant corrective declines towards 141-145 zone will act as a good entry point to perma-bulls.

A potential entrance exists at CMP, as the stock is likely to run towards its all time high at 194 mark. Aggressive targets placed at 225 mark. Place stops below 135. Holding Period: 3 Months.

## From Comfort Research Desk...

### Sensex: 36,194:

**The Week That Was:** The benchmark Sensex staged a spectacular rebound in last week's trade amidst value buying and short covering from lower levels. The optimism was on backdrop of tanking oil prices and strength in Indian Rupee. The FIIs camp were seen in a buying spree mode.

Adding to the bullish forces were comments from Fed Chairman Jerome Powell's indicating expectations for a less aggressive pace of interest-rate hikes by the Federal Reserve. The street expects the central bank would pause its hikes soon after the December meeting.

Technically, the positive takeaway was that Sensex and Nifty ended well above their 200 DMA level of 34981 and 10761 respectively. The benchmark Sensex ended the week, 3.47% higher. The strength now suggests receding fears about market crash from current levels.

Sensex ended in green in all the five trading sessions of the week. The BSE MidCap index and the BSE SmallCap index inched up 1.07% and 0.53% respectively on weekly basis. Both the indices were seen outperforming the benchmark severely.

Amongst Sectoral indices on weekly basis, the key gainers were BSE IT index up 6.3%. BSE Bank index up 2.59%, BSE FMCG index gained 2.73% and BSE Auto index was up 2.45% while on the flip side the indices ending on a negative note on weekly basis were BSE Metal index down 1.66%, BSE Oil & Gas index down 1.31%.

Among the BSE-30 stocks, the major gainers were: Infosys, TCS and HDFC which were up 7.3%, 6.7% & 5.5% respectively. The top three losers of the week were: Bharti Airtel, Tata Motors and ONGC which were down 6.1%, 5.4% and 3.6% respectively.

Meanwhile, Wall Street finished higher Friday, with the S&P 500 index and the Nasdaq notching their best week in nearly seven years, after upbeat comments from a U.S. trade official who suggested that some sort of a trade deal is possible during a meeting between President Donald Trump and Chinese leader Xi Jinping at the G-20 summit in Argentina.

For the week, the Nasdaq flared up 5.6%, the Dow ended the week 5.2% higher, while the S&P 500 inched up 1.7% on a weekly basis.

**Week Ahead:** Dalal Street will most likely to start the week on a subdued note as India's GDP or gross domestic product has shown the lowest growth in three years. Also hurting sentiments would be the data released from finance ministry which showed revenue collection from Goods and Services Tax (GST) declined to Rs 97,637 crore in November from Rs 1 lakh crore a month ago.

Also, no fireworks unlikely as there were no sizable breakthrough resolution between President Donald Trump and Chinese President XI Jinping. Trump just offered Xi tariffs reprieve in trade war ceasefire. The U.S. and China said they would launch negotiations to ease trade tensions, with the U.S. postponing plans to increase tariffs on \$200 billion in Chinese goods.

### All eyes will now be on:

1. Auto sales data for November 2018. Sales were muted for Maruti while Escorts delivered strong growth.
2. Crude-oil prices movement.
3. Trend in USD/INR.
4. RBI policy meet and the decision will be announced during market hours on December 5.
5. Elections in five states which will conclude on December 7. Counting of votes will be held across all the five states on December 11.

The key economic data lined up this week:

December 3: The Nikkei manufacturing for November.

December 5: Services PMI for November.

December 7: Foreign exchange reserves for the week-ended November 30 and deposit and bank loan growth for the fortnight-ended November 23.

Q2 results this week: REC on 5th December, Muthoot Finance on 6th December, IFCI on 7th December.

Technically, the key interweek hurdles to watch on Sensex are at 37,001 zone. Downside risk for Sensex only on any close below the key support at 34,501 mark. Below 34,575, expect the benchmark to slip towards 33201 support zone. The corresponding levels for Nifty are: Supports at 10376 and then at 9951 and then at 9651-9701 zone. Hurdles for Nifty at 11,111 mark

For the current week, we expect the benchmark Sensex to trade choppy and volatile. Aggressive traders can look to establish short positions on any strength with strict stop above 37,001 on Sensex.

Amongst momentum stocks looking bright are: TITAN, AUROBINDO PHARMA, EXIDE, BAJAJ FINSERVE, PVR, LARSEN, RELIANCE INDUSTRIES, HAVELLS, BAJAJ FINANCE, and BRITANNIA. We are negative on stocks like Ashok Leyland, Hero Honda, Lupin, Wockhardt, Motherson Sumi, Tata Motors and BHEL. Among sectoral indices, we have an underperformer rating on BSE Metal index amidst deteriorating technical conditions. Meanwhile, for this week, our most preferred pair strategies are:
